Design wind load	minimum 30 lb/sqft up to 70 sqft sections

Quality Extruded Aluminum Fixed Louvers proudly made in the USA! Our 4 inch deep models come with a choice of Channel Frame or Front Mounting Flange Frame. The flange is 2 inches wide. We offer paintable "mill finish" or we can send out for anodizing or any powder coat color. Our standard Louver comes with 1/2" grid, .051 flattened expanded aluminum bird screen on the back. Insect screen or bird screen with insect screen are available options. The mitered cut flange frame and welded blades are constructed of heavy duty .082" thick aluminum extruded in America. These louvers are great for commercial or residential applications. Specify the opening size to the nearest 1/4". Orders are manufactured 1/2" undersize to allow for possible out of square openings on Front Mounting Flange Frame models. The Channel Frame models mount within the opening, so they are made to the opening dimension. Dimensions are "w" (left to right) x "h" (top to bottom). Express service available, please call. All items are made to order, therefore returns are subject to a 50% restocking fee.

Questions: call factory direct (772) 223-9335 or visit our website: www.PlanBmfg.com
